

GNU Taler - A Payment System by GNU

GHCon2020

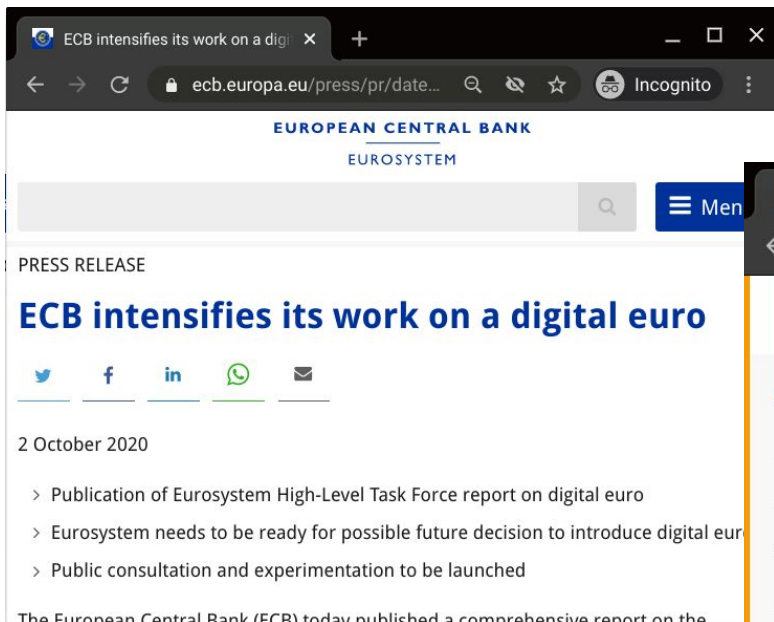

Why should you care about payments?

- Electronic Payments are inevitable
- Mainstream suggestions are not **Free Software**
- ... do not have **privacy protections**
- ... do not care about the (financial/psychological) **well-being** of end users.

=> The Free Software community should push for a better solution

Why now?

ECB intensifies its work on a digital euro

PRESS RELEASE

ECB intensifies its work on a digital euro

2 October 2020

- > Publication of Eurosystem High-Level Task Force report on digital euro
- > Eurosystem needs to be ready for possible future decision to introduce digital euro
- > Public consultation and experimentation to be launched

The European Central Bank (ECB) today published a comprehensive report on the

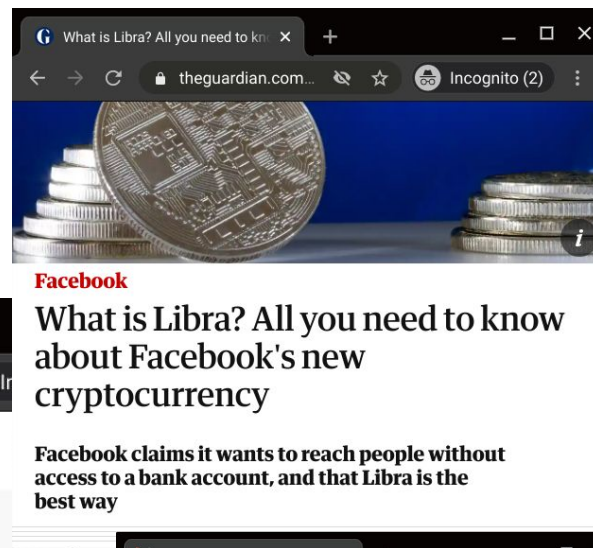

E-krona | Sveriges Riksbank

E-krona

The use of banknotes and coins is declining in society. At the same time, technological advances with regard to electronic money and payment methods are proceeding rapidly. The Riksbank sees potential problems with the marginalisation of cash and has therefore initiated a pilot project to develop a proposal for a technical solution for Swedish kronor.

GNU Taler: Overview

- Project started in 2014
- Goal: Develop **libre** infrastructure for deploying **privacy-friendly** electronic payment systems that could gain **mainstream** adoption.

Small scale: Cafeteria, festival, company office, hacker space

Large scale: Retail Banks, Central Banks (CBDC)

User Experience

Taler at Biel University of Applied Sciences

1. Student installs wallet
2. ... tops up wallet with CHF digital cash at cashier terminal
=> E-Cash is on the *device*, **no account/identity** is created
3. *Optional:* ... sets up backup / key recovery
4. ... selects item to buy at vending machine
5. ... scans QR code, reviews payment and pays **anonymously**
6. After aggregation period, cafeteria receives payment made via Taler as bank transfer

GNU Taler: Principles

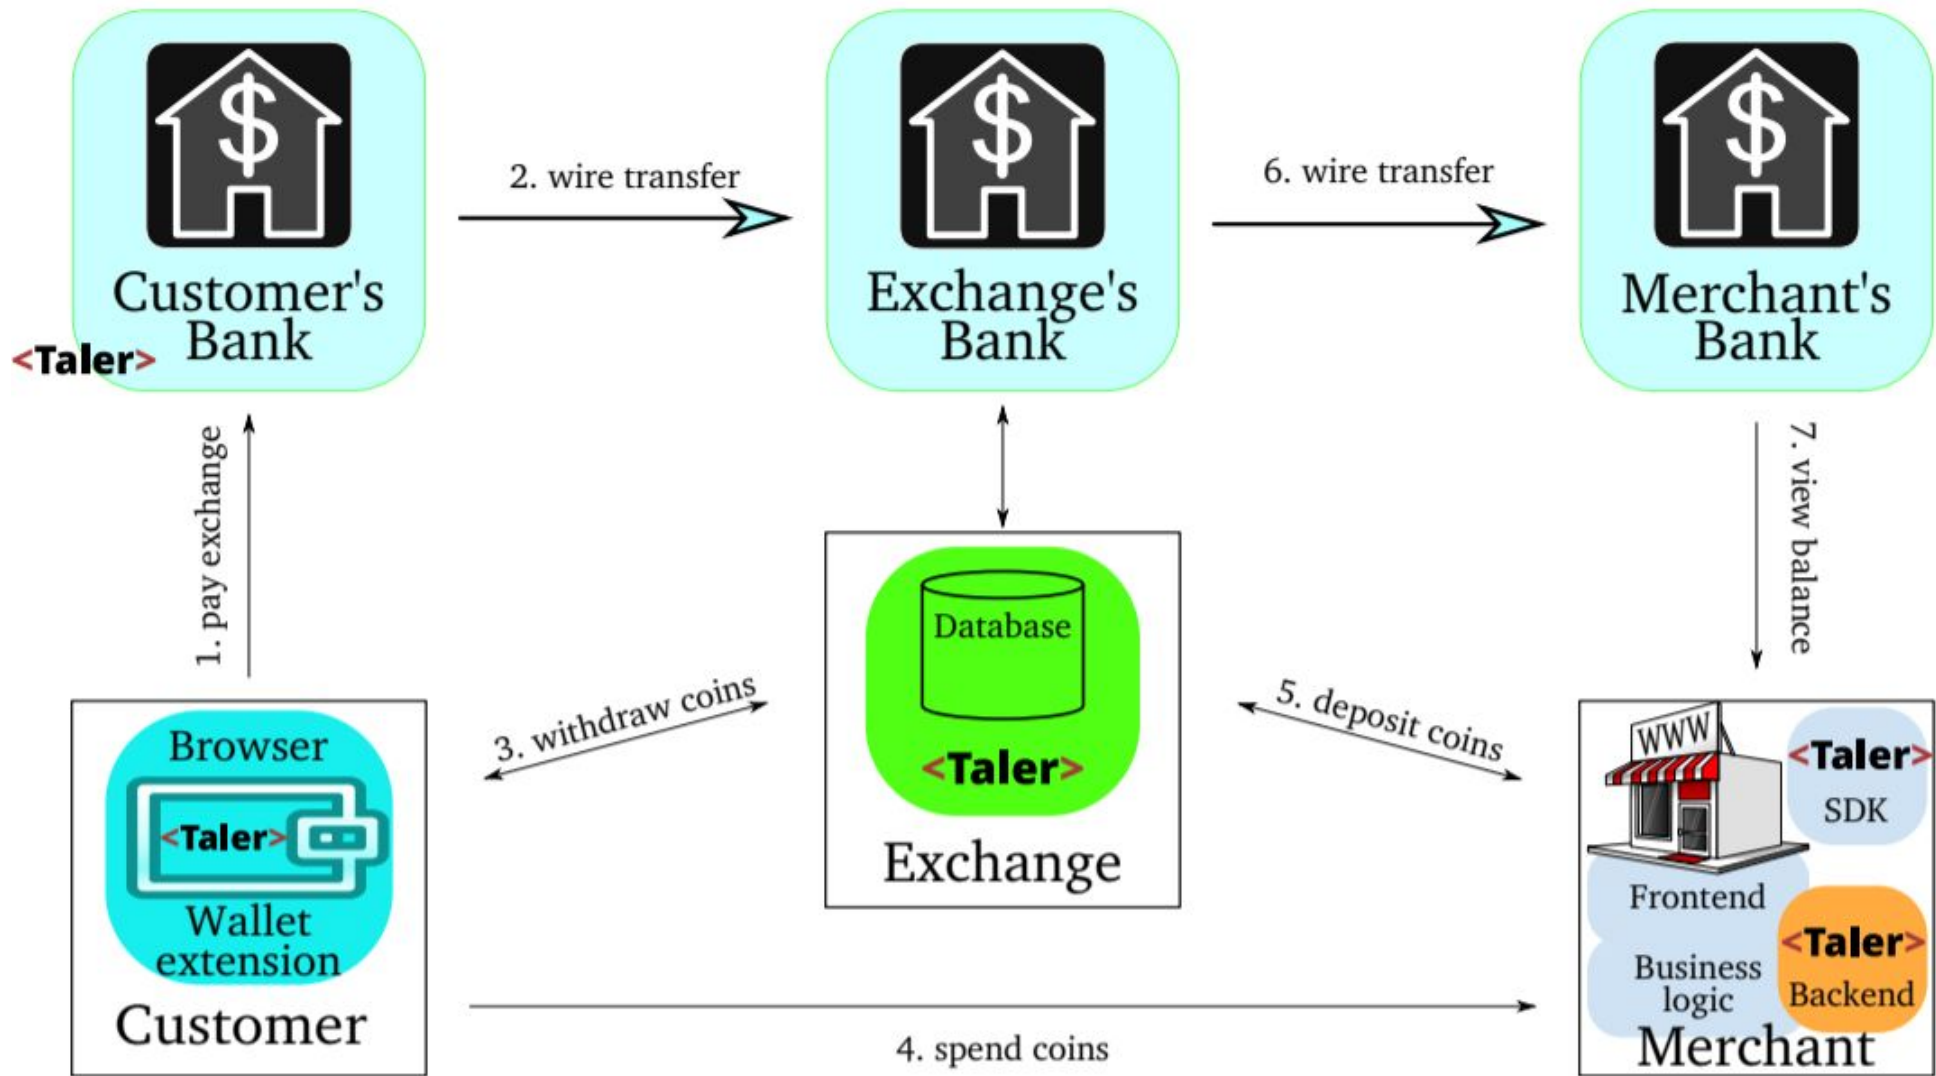

1. Free/Libre Software
2. Protect the privacy of buyers
3. Auditability (tax/fraud)
4. Prevent payment fraud
5. Collect the minimum information necessary
6. Be usable
7. Be efficient
8. Fault-tolerant design
9. Foster competition

GNU Taler: Technology

- Based on Chaum's E-Cash (1980s) with some improvements
- Proven and time-tested cryptographic technology
- **Income-transparency** for merchants, **anonymity** for customers

Trade-off: Customer and merchant are **separate entities**

GNU Taler: Components

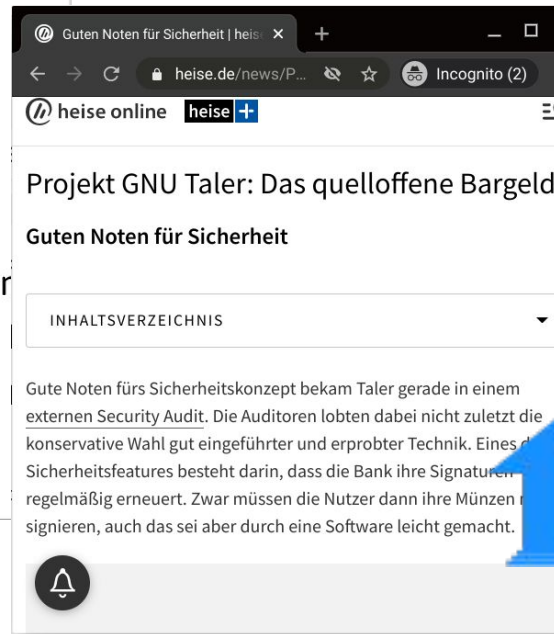

- Exchange (trusted PSP)
- Auditor (software+party)
- Merchant Backend
- Demo Bank
- Wallet (API, CLI, WebExtension, Android)
- Storefront Demos
- Vending Machine Demo
- LibEuFin (connection to bank/accounting system)
- Sync Storage Service
- Anastasis Key Backup&Recovery

GNU Taler: Progress

Research Project / GNU Taler Snack Machine

The 'GNU Taler' system hosted at Berr University of Applied Sciences represents a secure and transparent alternative to the best-known digital currencies right now. A GNU Taler payment system was installed in a

LibEuFin

GNU Taler: What's Left?

- Additional security audits
- UX improvements and cross-platform support for wallets
- Finish backup & key recovery implementation
- Project for auditor approval in Eurozone in progress
- Operation & auditing of an Exchange in Germany
- Onboarding of merchants
