

# Surviving the Surveillance Pandemic

# GHCon2020

# Introduction

isabela

IRC: isabela

Executive Director of the Tor Project.

## Our mission:

To advance human rights and freedoms by creating and deploying free and open source anonymity and privacy technologies, supporting their unrestricted availability and use, and furthering their scientific and popular understanding.

# COVID-19

- Covid-19 hit the world
- Physical distance from each other became crucial to contain the spread of the virus
- Because of that having access to Internet also became crucial for us to continue our life activities
- From working from home, online classes, remote medical care and staying connected with our loved ones. being able to spread and access information.

# What this presentation will cover:

- Collection of news articles showing how surveillance has increased and affected our day to day life
- Suggestion of tools to protect your privacy

# Censorship & Control of Information

Technology firms are processing large volumes of confidential UK patient information in a data-mining operation that is part of the government's response to the coronavirus outbreak, according to documents seen by the Guardian.

**Palantir**, the US big data firm founded by the rightwing billionaire Peter Thiel, is working with Faculty, a British artificial intelligence startup, to consolidate government databases and help ministers and officials respond to the pandemic.

The whole system depends on trust. If users don't trust that an app is working in their best interests, they will not use it. So developers need to be as transparent as possible about how their apps work and what risks are involved. They should publish source code and documentation so that tech-savvy users and independent technologists can check their work. And they should invite security audits and penetration testing from professionals to be as confident as possible that their apps actually do what they say they will.

## How EFF Evaluates Government Demands for New Surveillance Powers

BY ADAM SCHWARTZ | APRIL 3, 2020

A decorative graphic on the left side of the text area, featuring a stylized, colorful geometric pattern with red, green, and yellow shapes.

The COVID-19 public health crisis has no precedent in living memory. But government demands for new high-tech surveillance powers are all too familiar. This includes well-meaning proposals to use various forms of data about disease transmission among people. Even in the midst of a crisis, the public must carefully evaluate such government demands, because surveillance invades privacy, deters free speech, and unfairly burdens vulnerable groups. It also metastasizes behind closed doors. And new surveillance powers tend to stick around. For example, nearly two decades after the 9/11 attacks, the NSA is still conducting dragnet Internet surveillance.

A decorative graphic on the right side of the text area, featuring a stylized, colorful geometric pattern with red, green, and yellow shapes.
